BIOCHEM. BIOPHYS. RES. COMMUN. THOUGH MAY PLAY A ROLE IN EMBRYONAL PUMOR FOR TUMOR ANTIGEN RECOGNIZED ON A MELANOMA BY AUTOLOGOUS PROGRESSION. ANTIGEN RECOGNIZED ON A MELANOMA BY AUTOLOGOUS CYTOLYTIC T LYMPHOCYTES.

--- TISSUE SPECIFICITY: EXPRESSED IN MANY TUMORS OF SEVERAL TYPES, SUCH AS MELANOMA, HEAD AND NECK SOUAMOUS CELL CARCINOMA, LUNG CARCINOMA, HEAD AND NECK SOUAMOUS CELL CARCINOMA, LUNG CARCINOMA AND BREAST CARCINOMA, BUT NOT IN NORMAL TISSUES EXCEPT FOR TESTES AND PLACENTA. NEVER EXPRESSED IN KIDNEY TUMORS,
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                Gaugler B., van den Eynde B., van der Br

THE TABLE TO THE TRANSLATE THE TENDER THE TENDER TO THE HETEROGENOUS THE SPROTEIN (1995).

L. J. Biol. Chem. 270:28780-28789(1995).

C. -! FUNCTION: THIS PROTEIN IS A COMPONENT OF THE HETEROGENOUS THE PROCESSING EVENTS THAT PRE-MRNAS UNDERGO BEFORE BEST OF THE PROCESSING EVENTS THAT PRE-MRNAS IN THE CYTOPLASM. PROBABLY CONTIONAL, TRANSLATABLE MRNAS IN THE CYTOPLASM. PROBABLY CONTIONAL, TRANSLATABLE MRNAS IN THE CYTOPLASM.

C. -!- SUBCELLULAR LOCATION: NUCLEAR; NUCLEOPLASM.

C. -!- SUBCELLULAR LOCATION: STAPPRESSED UBIQUITOUSLY.

-!- SIMILARITY: CONTAINS 3 RNA RECOGNITION MOTIFS (RRM).
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               Query Match

J. Biol. Chem. 270:28780-28789(1955).

-I. FUNCTION: THIS PROTEIN IS A COMPONENT OF THE HETEROGENOUS NUCLEAR RIBONUCLEOPROTEIN (HNRNP) COMPLEXES WHICH PROVIDE THE SUBSTRATE FOR THE PROCESSING EVENTS THAT PRE-MRNAS UNDERGO BEFORE BECOMING FUNCTIONAL, TRANSLATABLE MRNAS IN THE CYTOPLASM. BINDS POLY (RG).

-I. SUBCELULULAR LOCATION: NUCLEAR; NUCLEOPLASM.
-I. TISSUE SPECIFICITY: EXPRESSED UBIQUITOUSLY.
-I. SIMILARITY: CONTAINS 3 RNA RECOGNITION MOTIFS (RRM).

-I- FUNCTION: TOPOISOMERASE IV IS ESSENTIAL FOR CHROMOSOME
SEGREGATION. IT HAS RELAXATION OF SUPERCOILED DNA ACTIVITY.
PERRORMS THE DECATEMATION EVENTS REQUIRED DURING THE REPLIC
OF A CIRCULAR DNA MOLECULE (BY SIMILARITY).

-I- SUBBUNIT: COMPOSED OF TWO SUBBUNITS: PARC AND PARE.
                                                                                                                                                                                                                                                                                                                          MEDLINE=99206606; PubMed=10192388;
